NUMBER F7-9

SAFETY BOARD HOLDER

Patented.

Length 28 inches to bottom of holder. With medium screw base porcelain socket. Made 6 inch size only. Solid brass chain.

Oxidized Bronze Finish.

	Not Wired	With Wire
1 Electric	\$9.00	\$9.50

Above prices do not include glassware.

Boxing charge is included. See page 71 for complete price. No. 14 gauge wire with heat resisting insulation used when ordered wired. See phantom view of the Safety Board Holder at top center of page.

SAFETY BOARD HOLDER

Patented.

This holder should be used where safety is the first requirement. With expensive or heavy glass, when used in schools or assembly rooms, or when suspended over valuable objects, such as fine show cases, statuary or the like, a Safety Board Holder is recommended.

The Safety Board holds the glass from the inside and the expansion of the glass, because of the heat from the lamp, does not increase the tension, and cannot break the glass.

The mechanism is simple, one thumb screw at the side regulates the curved slots that fit inside and hold the glass.

The lock nut prevents the accidental turning of the regulating screw.

Because of the simple operation in large institutions where cleaning and maintenance is an expense, the Safety Board will soon pay for the extra cost.

BEACO HOLDERS

The cross section view above shows the many improvements in construction of the Beaco.

Notice the porcelain socket—it fastens in place with two screws through the shell and into the cast loop. The socket cannot possibly turn and twist the wires or become loosened.

The cast loop has a projection that extends through the shell or holder, thus providing a substantial and smooth bushing for the passage of the wires.

The chain loop is attached to the top of the holder by two screws, distributing the weight of holder and glass, and suspending it plumb and level.

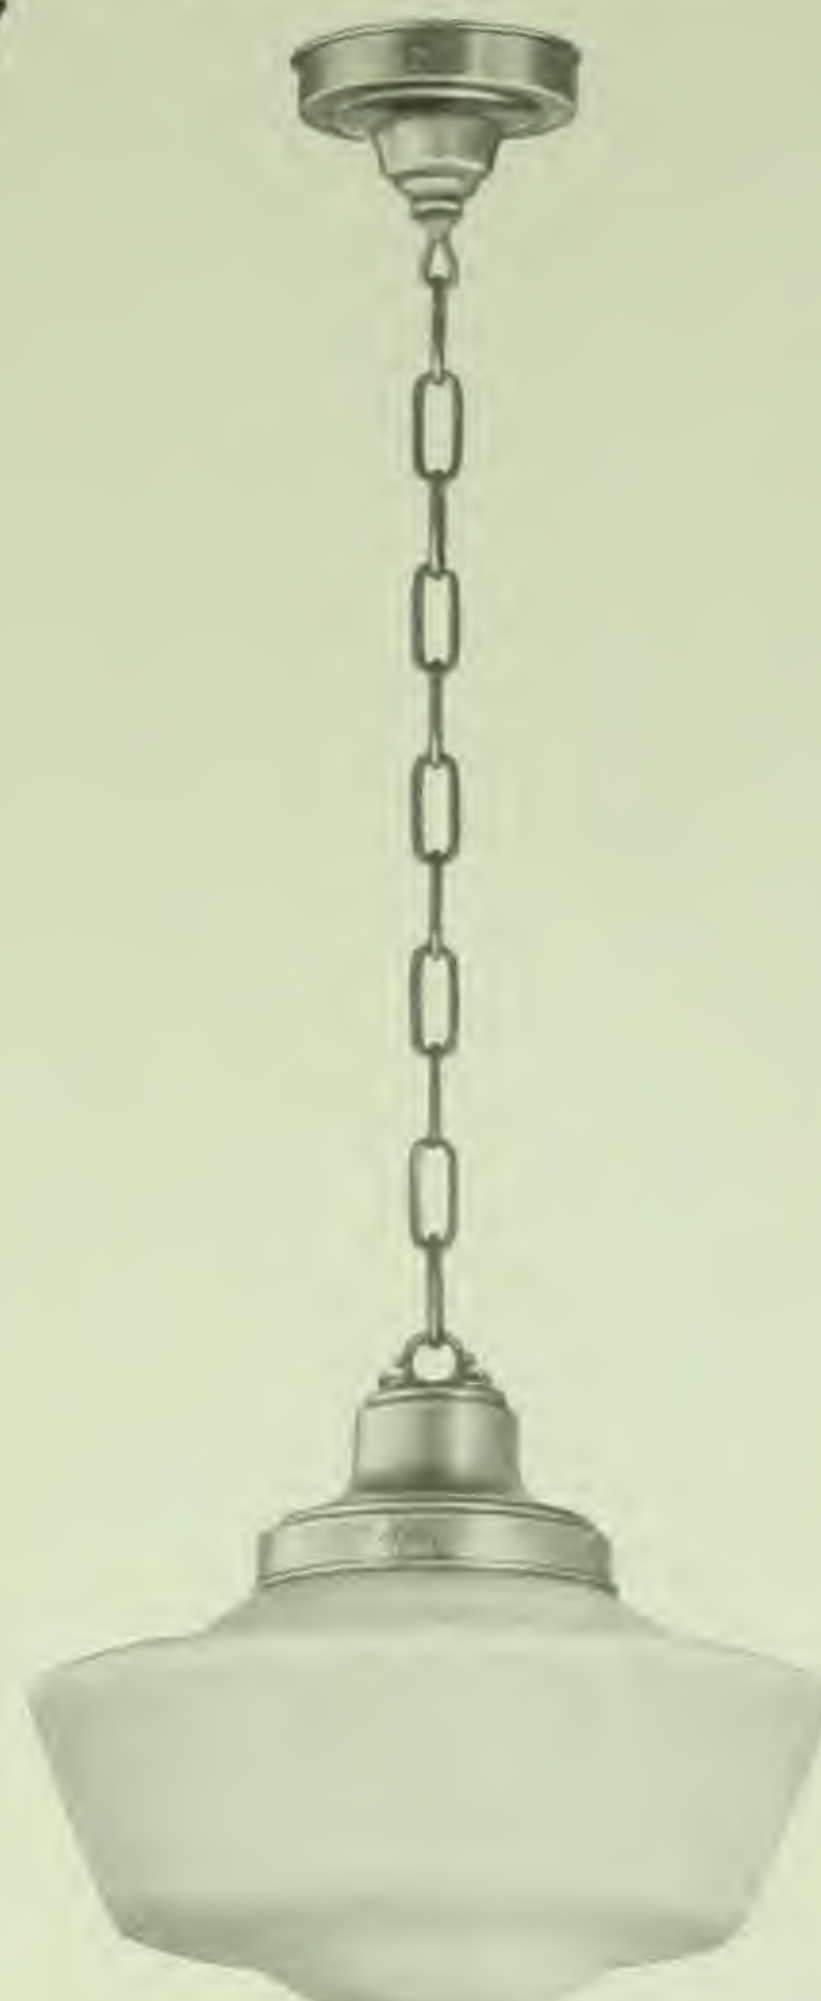

The wire way is unusually large and No. 14 gauge stranded wire with heat resisting insulation is always used.

Screws for holding glass are large with knurled heads and pass through brass bushings that are in turn riveted and soldered into the holder.

Oxidized bronze, the standard finish, is a dark bronze plated color, carefully lacquered.

Glass globes are not included in prices quoted on this page.

BEACO PENDANTS

Length 28 inches to bottom of holder. With porcelain socket. Made of 22 gauge brass and solid brass chain.

Above prices include charge for boxing.

BEARDSLEE QUICK ACTION BAR

Patented

For conduit or knob and tube work. A brass plate riveted to the iron bar is slotted in such a manner that when sprung on the threaded end of a stud or nipple it will sustain a dead weight of over 100 pounds.

TO INSTALL.

First loosen two screws attaching bar to fixture. Don't remove them.

THEN CONNECT WIRES

After connections are made the fixture is quickly and permanently placed in position by forcing the stud in the outlet box through the hole in the spring clip in the middle of the bar and tightening the screws. This is most easily done by placing the thumbs on the two screw heads and forcing bar as close to the ceiling as possible before tightening screws.

If the stud is too far back from the surface, it should be lengthened with extension pieces.

The long slots in Beardslee quick action bars make it possible to attach them to any standard size outlet box when desired.

To save time in installing, specify Beardslee quick action bars on all close fitting ceiling fixtures.

Quantity prices quoted on application.

Cased glass globes are pure white in color and have excellent diffusing qualities. The outer layer is crystal glass, insuring strength, and the inner lining a thin, smooth layer of white glass for diffusion.

24-Hour Shipment Catalog S-7

ADAPTA-UNIT CEILING LIGHT

Patented.

Diameter at ceiling 7 inches. With porcelain socket and Beardslee quick action bar. See top center of page for explanation of holder. Light density opal glass globe.

Brush Brass Finish.

Number	Glass Size	Socket	Lamp Size	Complete
E7G17	5x12"	Medium	75-200W	\$10.00
E7H17	5x14"	Medium	150-200W	11.10

Above prices include charge for boxing.

1—Made for 2 1/4" and 3 1/4" shade holders and socket covers.

2—Sliding this lever to left unlocks glassware, sliding it back to notch locks it securely. Absolutely fool-proof and easily operated with one hand.

3—THE ADAPTA-UNIT.

4—One of the three metal fingers that hold glassware on inside—holds globe securely but does not clamp it.

5—Can be attached by anyone to any one-light ceiling fixture or pendant now in use.

6—Use any strong shade holder or socket cover.

7—Baffle Plate inside reflects upward rays of light down to working plane.

8—THE ADAPTA-UNIT.

ADAPTA-UNIT REPLACEMENT

Patented.

Will fit on 2 1/4" or 3 1/4" inch holder, as indicated. No socket included. Light density opal glass globe.

Brush Brass Finish.

Number	Glass Size	Holder	Lamp Size	Price
G212R	5x12"	2 1/4"	75-150W	\$5.30

Note These Distinctive

DENZAR Features

- 1** METAL HOUSING—Made of steel. White porcelain enameled. Covers the socket and holder, encloses the upper part of the unit and allows the heated air to escape.
- 2** YOKE—Made of heavy spring steel. It supports the metal holder and the deflector. The latter deflects the heat of the lamp from the lamp base and socket.
- 3** METAL HOLDER—Supported by the yoke. Outlets provided in its upper rim for the exit of superheated air. The reflecting dome and lower bowl are supported in this section.
- 4** REFLECTING DOME—Made of opal glass. Gathers the upward rays of light, softens and distributes them. Permits just the right amount of light to filter upward, preventing shadows, black rings and bright spots on the ceiling.
- 5** AIR INTAKE—Plenty of cool air enters this small opening and drives all superheated air through the outlets in the holder. The smoke from a lighted cigar, held at the intake, demonstrates the thoroughness of the ventilation.
- 6** ADJUSTABLE HANGER—Allows the easy adjustment of the lamp to the proper position, without removing the glassware or any part of the unit. As the hanger carries the weight of the unit there is no strain on socket or wiring.
- 7** DEFLECTOR—Made of steel. White porcelain enameled. Checks all wasteful light. Catches the upward rays and redirects them toward the working plane. Held in the correct position by the yoke.
- 8** UPPER PART OF BOWL—Is of highly polished clear glass. This permits all the upward rays from the lower part of the bowl to reach the reflecting dome in full strength. Prevents the accumulation of dust and dirt.
- 9** LOWER PART OF BOWL—Is of the same glass as the upper part but fired with a hard, smooth, white, translucent, diffusing enamel. This diffuses the rays with practically no loss of light. Conceals the lamp filament from the direct line of vision and eliminates all glare of the lamp.

That the DENZAR gives satisfaction not only when first installed, but gives lasting satisfaction is evidenced by the hundreds of satisfied users and by the repeat orders we receive.

The phantom view above explains quickly how with the DENZAR you obtain the effect of semi-indirect lighting without using an open dust collecting bowl and without depending on the ceiling for reflection.

DENZAR permits the use of the Mazda C lamp without glare or distracting shadow.

Each Denzar is packed complete (except lamp) ready for hanging, in a separate strong carton. These cartons are made especially to fit the various sizes and insure safe shipment. Their handy size makes storage convenient and the large labels, identification easy.

Denzars are easy to hang. They come all wired, ready for installation. This requires but a few moments and then after the lamp is in place and the reflector and bowl attached, the unit is ready for service.

The table gives the carton measurements and maximum shipping weights for the various sizes of Denzars.

Size	Carton Measurements	Minimum Shipping Weight

Wire Guards Prevent Breakage

These wire guards are especially recommended for use in gymnasiums where basketball or indoor baseball is played, since they prevent any possible damage to the lighting unit. They have been adopted as a safety measure for other installations where Denzars are placed in exposed locations. They are well made and very strong.

Beaco Guard for No. 402 Denzar is No. 23

Beaco Guard for No. 401 and 401½ Denzar is No. 21

Beaco Guard for No. 400 Denzar is No. 18

Beaco Guard for No. 475 Baby Denzar is No. 15

These guards are priced on page 69

The DENZAR was designed to make it possible to use the Mazda C lamp and obtain good lighting effects without glare or harsh shadows. Hundreds of colleges, high schools and grade schools in all parts of the country have permanently solved their lighting problems by installing DENZARS. Its soft, white light, without glare or annoying shadows is ideally suited to class rooms. In stores, merchandise is shown to its best advantage and in offices better illumination increases the efficiency of the office force.

In addition to schools, stores and offices DENZARS are used in churches, hotels, restaurants, lunch rooms, theatres, bowling alleys, hospitals, railroad stations, armories, banks, garages and many other places.

BEARDSLEE

*The name to remember when buying
Lighting Equipment*

The fixtures shown on pages 81, 82 and 83 are designs which were made for buildings that required something in the way of lighting equipment other than stock items.

BEARDSLEE has specialized for years in designing and making lighting equipment for fine residences, churches, libraries, theatres and public buildings.

DESIGN Y8628

A wrought iron candelabrum, Gothic detail, made for the St. Mary's Roman Catholic Church at Williamsburg, Iowa.

DESIGN N21-196

Sconce or bracket, Gothic style, designed for use in the Chapel of Poor Handmaids of Jesus Christ, Donaldson, Indiana.

DESIGN N20-78

Ornamental Colonial type bracket. Made for a Pennsylvania home.

DESIGN N7287

Italian renaissance bracket of wrought iron. Made for Ft. Des Moines Hotel, Des Moines, Iowa.

Beardslee Chandelier Mfg. Co. is proud to identify all items of its manufacture by its fleur-de-lis trade mark . This trade mark is for your protection and guarantees the fixture to be a genuine Beardslee product.

The careful attention given to what some consider minor details is one of the factors that has made Beardslee chandeliers a standard the world over. All iron pipe, brass nipples and nozzles are reamed, making a ready passageway for wires. All wire used is of a size and insulated according to the National Board of Fire Underwriters code. Sockets and other accessories are the best obtainable. Brass chain is used except on black iron or gun metal finishes. No iron, aluminum or other substitute is used for brass castings. All stamped or spun shells are of heavy gauge brass. In finishing, the greatest attention is given to the preparation of the metal so that after the lacquer is applied if care is taken to prevent scratching or rubbing, the finish will last indefinitely.

DIRECTIONS FOR ORDERING

Mistakes may be avoided if you specify plate number as well as the fixture number, the number of lights, finish and whether desired "Not Wired" or "Complete." Order blanks are supplied customers upon request. All fixtures will be shipped "Complete" unless your order specifies "Not Wired."

Not Wired—The price quoted "Not Wired" is for the fixture only, without wire, sockets, holders, shades or lamps unless they are specifically mentioned as being included. In many cases sockets, glass or other material is included in the "Not Wired" price and this fact is mentioned after the number of the fixture.

Complete—The price quoted "Complete" includes wire, sockets, holders and shades as illustrated. Lamps are never included with fixtures.

Assembling—All chandeliers are completely fitted and tested at factory before shipping so they may be assembled and electrical connections made with a minimum amount of labor. To minimize the expense of packing and the liability of damage in transit the arms are usually separate from the body of the chandelier but wrapped carefully with it. Crowfeet or tripods are regularly furnished but if you wish we will supply 1/2-inch hickies without extra charge. Insulating joints and canopy insulators can be furnished at an extra cost.

Wiring—Approved wire is used. Wires to the screw shell of the socket are the marked wires and should be attached to the grounded wire in the building.

Length—Chandeliers are in stock the length cataloged; other lengths can be furnished with little delay and at prices quoted below. Measurements given are from the ceiling to the extreme bottom including the lamp or shade whether they are furnished or not.

Extra Lengthening—Unless mentioned otherwise, extra lengthening will be charged as follows: Casing or tube without wire, 50 cents list per foot, with wire, 60 cents. Chain without wire, 60 cents per foot, with wire, 70 cents. No additional charge is made for cutting off when fixtures are wanted shorter than cataloged.

Finishes—Fixtures are in stock in only the finishes cataloged. Finishing goods in quantities accounts for the low prices quoted, and other finishes unless produced in large quantities increase the cost. Do not order finishes other than those cataloged except when absolutely necessary. All fixtures are cataloged in the most desirable finish. Other finishes are subject to delay and are furnished only at an extra cost. Fixtures made of iron may be had in green color (Verde Antique) instead of black at an additional cost of ten per cent (10%), but iron goods will be sold in no other finishes.

When furnished in finishes other than cataloged the following additional charge will be made: An addition of ten per cent (10%) to all list prices for Brush Brass, Antique Brush Brass, Rich Gold, Polished Brass or Black finish.

An addition of twenty per cent (20%) to all list prices for Ivory, White Enamel, Nickel, Verde Antique, Ox Copper, Statuary Bronze, English Brass, Colonial Gold or Colonial brass.

An addition of thirty per cent (30%) to all list prices for Polished Silver, Antique Silver, Sand Blast Antique Brass, or any silver or sand blast finish.

All Beardslee finishes are guaranteed. We believe lighting equipment is only as good as its finish and great care is taken in this department, and all pieces carefully lacquered with the very best quality lacquer. Sand Blast, High Lighted Finish is a genuine antique metallic finish which has found favor because of its beautiful appearance and lasting qualities.

Delivery—Goods ordered from this catalog are carefully boxed and delivered to the carrier within 24 hours of receipt of order. If your order also specifies other goods and you want immediate shipment of the stock portion, we will be pleased to make two shipments if so instructed.

Claims—Responsibility for goods damaged or lost in transit is with the Transportation Company, but we will gladly assist in securing necessary adjustments. When goods are received in bad order immediately notify the carriers' agent, securing his endorsement of the facts on your freight or express bill and file your claim with the carrier at once. If there are any errors, report them to us fully, giving invoice date and number and we will correct at once or advise you what to do.

Boxing—Orders are carefully packed by experienced packers and a charge made for boxes, barrels or cartons used. Cost of cartons is included in DENZAR and BEACO prices and no extra charge made.

Routing—Always specify how shipment is to be made—freight, express or parcel post. Specify route if you have a choice. We will use our judgment when no instructions are given.

Terms—Our terms are 30 days net (1% for cash, 10 days). With your first order we suggest giving references, Chicago references if possible, to avoid delay.

C. O. D. Shipments—33 1/3% of the amount should accompany orders requested C.O.D. Shipment will be made by express or parcel post C.O.D. for balance or by freight with draft attached to bill of lading. Give us the name of the bank if you have a preference.

Returned Goods—Do not return any goods without instructions from us. Returned lacquered goods are never reshipped without refinishing even if in the original package. Our finishes are our pride and we dare not run the risk of possible scratches on the lacquer and subsequent tarnish or discoloration—therefore this rule. A service charge is therefore made on all returned goods because of this expense in addition to the cost of handling.
